SUMMARY

Aspiring Frontend Developer and Data Science Professional skilled in JavaScript, React, Python, and SQL. Experienced in developing responsive web applications and leveraging data insights to build efficient, user-focused solutions.

SKILLS

- Data analysis
- Python programming
- SQL and databases
- Machine Learning
- AI Prompting
- Excel Basics
- Project management
- Data visualization

EDUCATION

BACHELOR OF ENGINEERING: INFORMATION TECHNOLOGY

Expected in 04/2027

LDRP INSTITUTE OF TECHNOLOGY AND RESEARCH, Sector-15, LDRP-ITR, Gandhinagar,

- **Completed an Advanced Course on Green Skills and AI** (Skills4Future Program, Dec); learned how to use Machine Learning to solve environmental problems and worked on real-life projects.
- **Worked on hands-on Machine Learning projects** and learned how to use AI to create eco-friendly and sustainable solutions.
- **Attended a workshop on "No-Code AI Tools"** at LDRP-ITR, organized with Data Vidwan, Ahmedabad.
- **Learned how to use no-code AI tools**, which allow for building and launching AI models quickly without needing to write code.
- **Competed in the Smart India Hackathon 2024 (Internal Round)** as a member of Team 1ZERO, working with others to find creative ways to solve problems.
- **Served as the Decoration Committee Coordinator** at my university, where I led a team and managed tasks for campus events.

CERTIFICATIONS

Certificate of Completion - Advanced Course on Green Skills and Artificial Intelligence under the Skills4Future Program.

Internship Completion Certificate: Data Science Internship at Oasis Infobyte.

Certificate of Participation - Decoration Committee Coordinator at the College Tech Event.

ACTIVITIES

- Served as Decoration Committee Coordinator in the College Annual Tech Event.
- Managed the technical setup and organization for events, including sound, video, and equipment. I made sure everything was ready and running smoothly, so the sessions were professional and well-organized.

PROJECTS

- Built an **AI-based job recommendation system** using KNN for skill matching, with real-time chat and secure role-based dashboards. Built using React, Node.js, MongoDB, and REST APIs.
- Developed an **AI-based crop recommendation system** using soil and weather data, with real-time API integration and scalable backend architecture. Enabled multilingual support and efficient data handling using TypeScript, Supabase, and MongoDB.
